EXAMINER's AMENDMENT

In a telephone conversation with Ms. Bongiovi, on 11/26/03, the following changes were agreed upon to put this application in condition for allowance.

Claims 20-30 have been cancelled and new claims 31-41 have been added as follows:

31. A method for producing an infusion bag, the method comprising:
forming a suspension unit of a sheet-like carrier material such that said suspension unit includes a grasping area disposed at a first end of said unit;
forming independent of one another at least two chambers of a filter material such that said chambers include a top side and are capable of containing an infusible substance,
filling independent of one another said at least two chambers with the substance; and
connecting simultaneously each of said at least two chambers at their top sides to said suspension unit such that said at least two chambers are connected to opposite sides of said suspension unit at a common edge of said suspension unit and at an end of said suspension unit opposite said first end, so that said suspension unit is lying between said at least two chambers and so that upon grasping said grasping area, said at least two chambers fall away from said grasping area and one another and unfold down around the connecting, common edge, hanging freely with space between said at least two chambers,
wherein said suspension unit is formed to be longer than said chambers.

32. A method for producing an infusion bag, the method comprising:
forming a suspension unit of a sheet-like carrier material such that said suspension unit includes a grasping area disposed at a first end of said unit;
forming successively at least two chambers of a filter material such that said chambers include a top side and are capable of containing an infusible substance,
filling successively said at least two chambers with the substance;
connecting a first of said at least two chambers at a first top side to said suspension unit;

connecting a second of said at least two chambers at a second top side to said suspension unit and to said first top side to form a common edge of said at least two chambers; and wherein said suspension unit is formed to be longer than said at least two chambers, wherein said at least two chambers are connected to opposite sides of said suspension unit at a common edge of said suspension unit and at an end of said suspension unit opposite said first end, so that said suspension unit is lying between said at least two chambers and so that upon grasping said grasping area, said at least two chambers fall away from said grasping area and one another and unfold down around the connecting, common edge, hanging freely with space between said at least two chambers.

33. An infusion bag for preparing tea, comprising:

two chambers formed of a filter material for containing an amount of an infusible substance, said chambers being produced and filled with a substance independently of one another, said chambers each having a top side and being connected at respective top sides to form a common edge; and

a suspension unit made of sheet like carrier material, said suspension unit having a grasping area disposed at a first end of said suspension unit,

wherein said chambers are connected to opposite sides of said suspension unit at said common edge and at an end of said suspension unit opposite said first end, so that the suspension unit is lying between said chambers and wherein the suspension unit is longer than said chambers, and said chambers are connected to said suspension unit such that they are adapted to fall away from said grasping area and one another and unfold down around the connecting, common edge when said grasping area is grasped, so that said chambers hang freely with space between said chambers.

34. The infusion bag according to Claim 33, wherein said suspension unit is provided with punch holes which form a rectangular area and/or a T-shaped notch, so that said chambers being turned away from said grasping area when a hanger area is folded out from the suspension unit and arranged on a spout or lid of a pot.

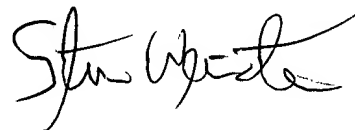

35. The infusion bag according to Claim 33, wherein each of the chambers is made out of tubular sheets.

Art Unit: 1761

36. The infusion bag according to Claim 33, wherein each of the chambers is made out of a sheet-like filter paper material by welding.
37. The infusion bag according to Claim 33, wherein each of the chambers is made out of sheet-like filter paper material by heat-sealing of side edges.
38. The infusion bag according to Claim 33, wherein the chambers are filled with different amounts of the substance.
39. The infusion bag according to Claim 33, wherein the substance comprises tea.
40. The infusion bag according to Claim 33, wherein the substance comprises aromatic substances.
41. The infusion bag according to Claim 33, wherein said chambers each having a bottom side, said bottom sides are releasably connected to each other.

The title has been changed to read:

-- Multi-Chambered Infusion Bag, Especially For Tea --
